Appendix E

NEEDS & RECOMMENDATIONS

TO: SSMCP Steering Committee DATE: November 12, 2021

PREPAREDGeoff Appel, AICPPROJECT NAME:JBLM Growth Coordination PlanBY:The Schreifer Group

SUBJECT: Cross-Discipline Needs & Recommendations

Cross-Discipline

This memo will summarize the needs and recommendations that affect multiple resources areas and will require cross-discipline coordination. These recommendations are summarized for Steering Committee consideration for the 2022 JBLM Growth Coordination Plan Update. For additional cross-discipline recommendations that specifically relate to climate change impacts, see the climate change recommendations memo.

1.0 Introduction

In preparing the Needs and Recommendations memos for all resource areas, a number of cross-discipline recommendations have emerged. This memo consolidates those recommendations in order to highlight the areas of overlap and coordination needed between various disciplines and work groups.

2.0 Needs and Recommendations

2.1 Provide land use compatibility information to local planning agencies and assist Pierce and Thurston Counties in evaluating adoption of the Washington State's Behavioral Health Model Ordinance

The findings of the land use existing conditions demonstrated that SSMCP has completed a lot of work addressing land use compatibility issues to date; and this conclusion was further supported at the Steering Committee retreat land use breakout session. The land use breakout group concluded that land use compatibility was a lower priority for SSMCP. Although, with Pierce County, Thurston County, and associated cities updating their Comprehensive Plans within the next three years, SSMCP has a great opportunity to further the support of land use compatibility in the region by support Comprehensive Plan Updates that won't be available again for another eight years. Due to this opportunity, it is recommended that SSMCP partake in small action items to improve land use compatibility in the region.

Washington State's Behavioral Health Model Ordinance Project Communications Toolkit was developed as a resource to support jurisdictions and providers in siting community-based behavioral health facilities. The toolkit and ordinance were developed in accordance with Revised Code of Washington (RCW) 71.24, Community Behavioral Health Services Act. Stakeholders indicated that Pierce and Thurston Counties have yet to determine if the model ordinance will be adopted.

Resource Areas Affected: Land Use & Housing, Health Care, Social Services

Recommendations

The following are potential work plan action items for SSMCP to address the described needs:

A. Support Local Communities in Updating their Comprehensive Plan Updates

Pierce County, Thurston County, and associated cities will be updating their Comprehensive Plans within the next three years. SSMCP has recently completed the 2019 MAIO Report and 2020 Housing Study and the Washington Department of Commerce recently created a Comprehensive Plan Military Compatibility Checklist. It is not clear if these documents have been shared with the local agencies or the level of awareness of these military compatibility planning efforts. To ensure that the 2023 and 2024 Comprehensive Plan updates include the best available information and best military compatibility policies, SSMCP can participate in the upcoming planning processes. It is anticipated that SSMCP would e-mail the military compatibility planning documents along with potential draft policy language to the local agencies for consideration when they embark upon their Plan update. SSMCP would also monitor issuance of draft plans and provide comment during the formal comment periods.

B. Convene a forum to discuss potential adoption of the Behavioral Health Model Ordinance.

The SSMCP could leverage the expertise of, for example, the Health Care Working Group to help guide Pierce and Thurston Counties through an evaluation of whether adopting the model ordinance would help the region achieve behavioral health goals. Per the ordinance's toolkit, jurisdictions are not required to adopt the model ordinance, but are encouraged to consider the following questions when evaluating adoption:

- Does the community already have processes and codes that allow for behavioral health facilities?
- Are there already behavioral health treatment facilities in the community?
- Where do community members who need treatment go for help?
- Has the county or city passed the sales and use tax for chemical dependency or mental health treatment services or therapeutic courts?

These questions are intended to assist jurisdictions in evaluating which components of the model ordinance may benefit their communities. The SSMCP could facilitate this discussion to help Pierce and Thurston Counties determine the best path forward and whether there are considerations that impact both counties that could be addressed through coordination.

2.2 Advocate for occupational licensure reciprocity

It would be preferable to allow military spouses working in health care a six-month to one-year grace period in which they can continue working after a Permanent Change of Station to JBLM. Following the grace period, individuals would need to fulfill state-specific requirements to maintain their license. Licensure reciprocity would help military spouses as they transition to JBLM. It would also increase the number of providers in the region, including those in health care. The proposed 6-month to one-year grace period would allow military spouses to work while they gathered the information and documentation needed to fulfill state-specific requirements, process paperwork, pay fees, and meet any additional state-specific training requirements.

This is a recommendation that overlaps between multiple topics within the GCP and includes professions such as nursing, teaching, child care and other related industries. RCW 43.60A.245 recently established a military spouse liaison position which advocates on behalf of military spouses for occupational licensure reciprocity.

Resource Areas Affected: Education & Child Care, Health Care, Social Services

Recommendations

The following is a potential work plan action item for SSMCP to address the described needs:

A. Support the military spouse liaison in advocating for occupational licensure reciprocity for military spouses working in the child care and education industry, among other industries.

SSMCP can take a supporting role in advocating to the state legislature for occupational licensure reciprocity to give military spouses working in the child care and education industry an opportunity to

continue employment for a period of six months to one year of a Permanent Change of Station to JBLM. After the grace period, individuals would be required to obtain any state-specific requirements to maintain their license.

B. As the SSMCP pursues occupational licensure reciprocity as part of its broader policy agenda, the Health Care Working Group should stay engaged and provide for health care-specific pursuits, as needed.

Because occupational licensure reciprocity is a broader issue impacting many fields, the Health Care Working Group should focus on supporting the SSMCP's overall legislative advocacy in this space. Stakeholders with health care-related subject matter expertise can contribute to the SSMCP's advocacy approach and provide the subject matter expertise needed to ensure that licensure reciprocity in the health care sector remains a component of the advocacy.

2.3 Create a school-based health clinic model for school districts to utilize

In interviews for the existing conditions report, staff from multiple school districts referenced student health in general, and the idea of considering the placement of health care clinics at schools. A need was suggested for school districts to provide health clinics at secondary schools so that parents or family members would not have to remove their children from school and travel to a doctor's office. Clover Park and Bethel School Districts provide health clinics for students and the Madigan Army Medical Center indicated the clinics that exist were closed during the COVID-19 pandemic but agreed that continuing them in the future is beneficial. However, the school-based health clinics that are offered in the Clover Park and Bethel School Districts have not been shared as a working model that can be applied in other school districts with military children.

Resource Areas Affected: Education & Child Care, Health Care

Recommendations

The following is a potential work plan action item for SSMCP to address the described needs:

A. Collaborate with districts and/or OSPI on creating a model of health clinics at schools.

SSMCP would act in a supporting role to facilitate conversations and bring resources together in an effort to create a model for deploying in-school health clinics. SSMCP can serve a coordinating function for communication and information between school districts, JBLM, or the Office of the Superintendent of Public Instruction.

2.4 Prioritize initiatives that expand behavioral health services for military family members, including adults and children.

Stakeholders indicated that individuals and families living off-installation tend to prefer accessing medical services off-installation because it is less cumbersome to go to appointments near their homes off-installation than coming onto the installation for care. Stakeholders from Madigan Army Medical Center (MAMC) noted that the most pressing need is expanded behavioral health support for military family members, including adults and children. The SSMCP could model activities on similar efforts, such as:

• The Connecticut Military Support Program (MSP). Connecticut is unique in that no other state in the country has established a program that embeds civilian clinicians within the National Guard Units at the Company level. MSP provides an array of behavioral health services to Connecticut's veterans, citizen soldiers and their family members. MSP clinicians are embedded within Guard Units affected by deployments. Embedded MSP clinicians are civilian clinicians who serve our citizen soldiers in the National Guard and their families. Unit members receive confidential support and assistance from their embedded clinician in accessing community support services. Embedded Clinicians are all licensed Master's-level behavioral health professionals who are credentialed by, and sub-contract with, Advanced Behavioral

Health, Inc. ABH authorizes all embedded clinician services, pays claims, monitors contract performance, and engages in re-credentialing of clinicians.

 Maryland Coalition of Families for Children's Mental Health. Maryland Coalition provides advocacy and support to families and caregivers of children and youth with behavioral health issues. They offer a range of support services such as, advocacy, information and referral, support groups, transition-age youth, military family supports, and more.

Resource Areas Affected: Social Services. Health Care

Recommendations

During the October 2021 Behavioral Health Care Forum, which brought together a wide range of stakeholders, including those representing civilian providers and those representing JBLM, there was extensive discussion regarding enhancing behavioral health support in the region.

The following are potential work plan action items for SSMCP to address the described needs:

A. Facilitate coordination among community organizations and JBLM to build a network of resources in the region.

Stakeholders suggested that the behavioral health support in the region should consider the full spectrum of factors that could be causing someone to seek behavioral health support. For example, sometimes the root of a crisis is not necessarily psychiatric, but related to other factors, such as social, financial, or spiritual challenges. The SSMCP could convene focus groups to facilitate discussions among community providers and the military seeking to build out a robust network of resources across the fenceline such as:

- Comprehensive Referral Networks: Stakeholders suggested that regionally, the approach should be "no wrong door, but any door you enter will take responsibility to get you to the right one." To that end, referral and service networks should include support services that include behavioral health support, as well as social, financial, and spiritual support, so that individuals can be connected with the service that best addresses their needs. An ancillary benefit to this approach is that it could help alleviate some of the pressure on behavioral health services, which often have long wait times.
- Peer-to-Peer Resources: Similar to comprehensive referral networks, stakeholders noted that peer-to-peer resources can be an excellent approach for providing individuals with support, including as an interim option while waiting to connect with a behavioral health provider and as a primary means of support. Peer-to-peer resources can include group activities connected to the community, such as volunteer activities, to help provide a sense of community and purpose. For example, the Veterans Conservation Corps Program runs programs where Veterans can learn to farm or build trails. They have found that those kinds of volunteer opportunities can be therapeutic and helpful for some individuals. Another example format of a peer support group is Alcoholics Anonymous. Ultimately, these social groups give participants a sense of exercising control over the quality and direction of their lives as they draw on lived experiences or shared characteristics to provide knowledge, experience, emotional assistance, practical help, and social interaction to help each other.
- Enhancing "access points" for care: Stakeholders reiterated the need to have ample access points for accessing care networks, especially because so many service members and their families live in the community. In addition to the link between Military OneSource and Washington 211, ideas such as developing a mobile app to coordinate resources, increasing outreach to rural areas, and leveraging telehealth were suggested. Bridging access points "hands the individual over" to another provider by taking responsibility of their continuity of care, rather providers letting go of the patient to "go it alone." Peer-to-peer resources, as described above, also help to bridge these access points.

Stakeholders underscored the importance of venues, like the Behavioral Health Care Forum, as an opportunity for providers in the community and military to get to know one another and build trust across the fenceline, which ultimately leads to more seamless referrals and support for service members and their families. Though the SSMCP may not take the helm in developing specific resources, the SSMCP provides a framework within which organizations can collaborate in pursuit of these goals.

2.5 Apply an Equity Lens to Future SSMCP Efforts

Direction from the SSMCP Steering Committee indicates that Qol-specific work plan actions or actions focused solely on recreation and leisure amenities are not seen as priorities for future SSMCP effort. However, the need to address issues of socioeconomic equity has been expressed by key stakeholders. The recommendation to apply an equity lens to future SSMCP efforts is a cross-discipline recommendation. This likely takes the form of incorporating the need for this analysis as a component in the scopes of work of future efforts, but may also include the SSMCP playing a supporting role in ongoing efforts more focused on equity. As an example of the former, future housing studies may seek to gather socioeconomic data to assess the extent to which differences in access to attainable and high-quality housing is affected by inequitable socioeconomic conditions. An example of the latter may be finding opportunities to support the Association of Defense Communities' (ADC) One Military, One Community Initiative.

Resource Areas Affected: All

Recommendations

The following are potential work plan action items for SSMCP to address the described needs:

A. Incorporate an Equity Lens in Future SSMCP Efforts

Incorporate the requirement for an analysis of socioeconomic equity factors in future scopes of work. SSMCP would act in a lead role in establishing such requirements.

B. Support ADC's One Military, One Community Initiative

Support the ADC's One Military, One Community Initiative. SSMCP would play a supporting role in this effort.

2.6 Establish a permanent point-of-contact for JBLM coordination

There is a demonstrated need for a long-term civilian liaison (or team) to facilitate timely, meaningful information-sharing between JBLM and the surrounding communities. A dedicated liaison (or team) would fill the gaps and serve as a preliminary connection point between the installation and the communities on a variety of topics.

The SSMCP was established ten years ago to "improve and formalize collaboration and coordination between the installation leadership and community executives." In response to this demonstrated need, the community mobilized and developed a formal membership structure (including a dues-paying system to fund staff). Today the SSMCP has about 50 member organizations, including the local cities, counties, and agencies that surround JBLM, and two personnel on staff. The SSMCP and its members continue to rely heavily on coordination with uniformed members of the military who rotate to other billets every 2-3 years.

At some installations throughout the Department of Defense infrastructure, civilian staff have been appointed as liaisons between their community and the installation to build institutional knowledge and provide a one-stop-shop for community inquiries. At these installations, it has been recognized that the coordination required with the host communities often transcends the boundaries of the installation and the silos on an organizational chart. For that reason, these staff members typically report directly to the installation commander while working closely with installation departments, divisions, directorates, tenants, etc.

The ideal appointee to such a position would be well-versed in local government and the operation of local non-governmental agencies. Ideally the liaison would be well-connected in the community or able to quickly build such networks for the installation's benefit. These liaisons may have a background in urban planning, engineering,

geography, landscape architecture, or political science (or any related field), or they may have a background in military operations.

Resource Areas Affected: All

Recommendations

The following is a potential work plan action item for SSMCP to address the described needs:

A. Advocate for and assist JBLM in creating a civilian Community Planning Liaison Officer (CPLO) position.

Following the precedent set by the Navy and Air Force at other joint installations, JBLM should consider the creation of and/or appointment of a dedicated civilian liaison officer to assist with issues related to community coordination, mission sustainment, and intergovernmental/interagency coordination. SSMCP would play a supporting role in this effort.

2.7 Transportation Demand Management Program Expansion

Expand the number and scale of transportation demand management programs available at JBLM to reduce the need for service personnel to rely on single-occupant vehicles to travel to and from base.

Resource Areas Affected: All

Recommendations

The following are potential work plan action items for SSMCP to address the described needs:

A. Support expansion of vanpool programs

SSMCP should support local transit agency and JBLM efforts to expand vanpool offerings both on and off-base. Expanding the vanpool offerings may help reduce the daily demand for vehicle access to JBLM. SSMCP would play a support role, assisting JBLM and local transit agencies with outreach and identifying funding sources.

B. Continue to enhance on-base shuttle system

SSMCP support the work of the JBLM Public Works staff to better understand how personnel are using the existing on-base shuttle system. Improving connectivity with off-base transportation hubs (including transit stops and TNC pickup/drop-off locations) could be explored for the existing shuttle system. SSMCP would likely play a support role, assisting JBLM and local transit agencies with outreach and coordination.

C. Relocation of Services Off-base

SSMCP should work with JBLM staff to take advantage of opportunities as they arise to locate certain services (such as health care, veterans' services, etc.) off-base or outside the secure perimeter to reduce transportation demand to and from base. This could also include leveraging new services such as tele-health that would reduce the need to travel. SSMCP would likely play a support role, assisting JBLM personnel and dependents, and the various service providers in the region.

NEEDS & RECOMMENDATIONS

TO: SSMCP Steering Committee DATE: November 12, 2021

PREPARED Jon Pascal, PE PROJECT NAME: JBLM Growth Coordination Plan BY: Paul Sharman, PE

Transpo Group

SUBJECT: Transportation Needs & Recommendations

Transportation

This memo summarizes the Transportation Needs and Recommendations for the 2022 JBLM Growth Coordination Plan Update. The needs and recommendations are based on the findings in the Transportation Existing Conditions Report and input from the Transportation Working Group and Steering Committee members.

1.0 Introduction

In the Transportation breakout session held at the Steering Committee Retreat on September 10, 2021, a summary of the current and emerging needs was discussed and conclusions were reached. The conclusions are summarized as follows:

- There was consensus that the recommendations captured the highest priority transportation related needs around JBLM.
- There was agreement that SSMCP should continue to play a leading role in advocating for I-5 improvements at the state level and consider playing a supporting role at the federal level.

2.0 Needs and Recommendations

2.1 Support I-5 Corridor Improvements

As the primary corridor of travel through the study area, I-5 is the most important transportation facility for JBLM personnel and for residents of Pierce and Thurston Counties. SSMCP should work to ensure that I-5 can support increased growth in the region through the following recommendations.

Recommendations

The following are potential work plan action items for SSMCP to address the described needs:

A. Pursue Funding for I-5 Nisqually Improvements south of Mounts Road

SSMCP should continue working with the Washington State Legislature to advocate for the allocation of public funds for I-5 improvements south of Mounts Road through the Nisqually Delta. These improvements will benefit both JBLM personnel and residents of Pierce and Thurston County. SSMCP should continue with a leading role in this advocacy work, as it has done in the past for previous I-5 improvement funding, and identify the best forum for supporting funding for I-5 expansion at the federal level.

B. Support Expansion of I-5 HOV System between Tacoma and Olympia

Stage 2 of the I-5 JBLM improvements were recently completed, which constructed a new HOV lane in each direction through JBLM and rebuilt the Thorne Lane and Berkeley Street interchanges. SSMCP should continue to monitor the progress of the Stage 3 improvements that include the construction of a new DuPont-Steilacoom

Road interchange. After completion of the I-5 improvements through JBLM, the SSMCP should consider advocating that WSDOT extend the HOV lanes north to connect to the regional HOV system at their present terminus at S 38th Street in Tacoma. Connecting the recently completed high-occupancy vehicle lanes into the regional HOV system will improve the mobility and resiliency of multimodal travel along I-5 through the JBLM area.

C. Continue Legislative Advocacy at State & Federal Level

SSMCP should continue its legislative advocacy for transportation funding at the state level and expand advocacy efforts to the federal level as well to take advantage of other funding opportunities. Transportation improvements in the area will need to be funded through a variety of funding mechanisms at the local, regional, state, and federal levels and SSMCP provides an optimal forum to advocate together as a military community for the shared interests of the surrounding jurisdictions and transportation providers.

2.2 Enhance Resiliency Planning and Monitor Environmental Impacts

As the primary north-south corridor through the study area, I-5 is a critical transportation corridor for the movement of people, goods, and emergency services. There is a need for improved resiliency as events that cause disruptions to I-5 (flooding, large numbers of collisions, etc.) have widespread impacts. Climate change will likely increase the number of risk factors for disruptions to I-5, further supporting the need for improved resiliency to I-5. Additionally, further environmental impacts caused by transportation sources are being studied and SSMCP should be aware of these impacts and work with other agencies to mitigate these impacts.

Recommendations

The following are potential work plan action items for SSMCP to address the described needs:

A. Continue Regional Emergency Access Planning

SSMCP should investigate options to address travel during times of emergency by having an operational plan to utilize secondary JBLM gates to provide temporary access to/from JBLM in times of emergencies or incidents that significantly disrupt travel between Pierce and Thurston Counties. SSMCP should play a supportive role in this planning process, bringing together JBLM staff and other regional partners for meaningful conversation and engagement.

B. Enhance Connections between Thurston and Pierce Counties

As part of the advocacy work to identify funds for I-5 improvements south of Mounts Road through the Nisqually Delta (see recommendation 2.1.A), SSMCP should ensure that any improvements identified include improvements to resiliency. In addition to I-5 improvements, a focus on improving travel on SR 507 (see recommendation 2.3) will add additional north-south capacity in times of I-5 backups and/or closures. SSMCP should continue to advocate for improved resiliency planning and be included in any operational planning that takes place between South Sound agencies and JBLM.

C. Monitor Environmental Impacts caused by Tire-related Chemicals

Research from recent studies has found a mix of chemicals that leach from tire wear particles and drain into local streams. The chemicals have been found to contribute to coho salmon deaths in urban streams. The NOAA Fisheries is developing potential mitigation measures to address the impacts and the outcomes could significantly impact federally funded transportation projects. SSMCP should work with other local transportation agencies to monitor the research and potential mitigation recommendations to understand the impacts to transportation projects in the area.

2.3 Support Local Arterial/Highway Access Improvements

The 2020 SSMCP Local Transportation Impact Study highlighted the need to make improvements to local and regional roadways surrounding the installation. These improvements are critical to enhancing travel options, improving access to the base, providing multimodal alternatives, and improving transportation system resiliency.

They would also compliment and support the improvements planned for the I-5 corridor by allowing some trips to bypass I-5 altogether on alternative routes or using alternative modes.

Recommendations

The following are potential work plan action items for SSMCP to address the described needs:

A. Pursue Funding for Roundabout Improvements on the SR 507 Corridor

As identified in the 2020 SSMCP Local Transportation Impact Study, three intersections were highlighted as locations that could be improved by the construction of roundabouts along the SR 507 corridor: Bald Hills Road, Vail Road, and SR 507. SSMCP should work with local, regional, and state agencies to help prioritize and secure funds to implement these critical improvements.

B. Investigate Access Improvements to JBLM at the Muck Creek Bridge

Also identified in the 2020 SSMCP Local Transportation Impact Study, improvements to JBLM access around the Muck Creek Bridge were highlighted as a high priority. SSMCP should work with the City of Roy and JBLM to prioritize these improvements and help identify potential funding sources.

C. Support DuPont-Steilacoom Road Improvements

SSMCP should support local agency efforts to improve the DuPont-Steilacoom Road corridor, which is owned by JBLM, but maintained by Pierce County. SSMCP would play a support role in any capital projects identified by JBLM or Pierce County. Any enhancements to this corridor will improve multimodal access to JBLM North and the communities of DuPont, Steilacoom, and Lakewood.

D. Advocate to Complete the Yelm Bypass

SSMCP should support WSDOT efforts to complete the Yelm Bypass, which is currently in the environmental impact assessment phase. This project would improve travel times for regional traffic, reduce the volume of regional traffic in downtown Yelm, help reduce the potential for collisions on Yelm Avenue and provide a new non-motorized route for cyclists and pedestrians. Phase 2 is proposed to have a shared use path on one side of the proposed new section of highway. SSMCP should play a supportive roll in this project.

2.4 Transit and Transportation Demand Management Program Expansion

Expand the number and scale of transportation demand management programs available at JBLM and in the region to reduce the need for service personnel to rely on single-occupant vehicles to travel to and from base.

Recommendations

The following are potential work plan action items for SSMCP to address the described needs:

A. Advocate for Improved Transit Service to and around JBLM

SSMCP should advocate for improved transit connections and service to and around the base, including extension of Sounder Rail to DuPont, new Tillicum Station with connections to JBLM, and further evaluation of frequent transit services along I-5 with connections to the base. SSMCP would play a supporting role in these service enhancements, working with local agencies and transit providers such as Sound Transit, Pierce Transit, and InterCity Transit.

B. Support Expansion of Vanpool Programs

SSMCP should support local transit agency and JBLM efforts to expand vanpool offerings both on and off-base. Expanding the vanpool offerings may help reduce the daily demand for vehicle access to JBLM and provide base personnel alternative transportation options. SSMCP would play a support role, assisting JBLM and local transit agencies with outreach and securing additional funding.

C. Support Enhancements to the On-base Shuttle System

SSMCP should support the work of the JBLM Public Works staff to continue to fund and operate the on-base shuttle system. Improving connectivity with off-base transportation hubs (including transit stops and TNC pickup/drop-off locations) will need to continue to be explored to enhance the existing shuttle system and allow it to more seamlessly integrate with other public transit options. SSMCP would play a support role, advocating for continued collaboration between JBLM and local transit agencies on outreach and coordination to enhance the overall transit system.

D. Encourage More Services Off-base

SSMCP should coordinate with JBLM and other regional providers to take advantage of opportunities as they arise to locate certain services (such as health care, veterans' services, etc.) off-base or outside the secure perimeter to reduce transportation demand to and from base. This could also include leveraging new services such as tele-health that would reduce the need to travel. SSMCP would likely play a support role, advocating that JBLM and the various service providers in the region continue strong collaboration on the subject.

2.5 Pursue Funding for Further Transportation Studies

As the transportation needs of JBLM and the surrounding area continue to evolve, SSMCP should pursue funding to further study several high priority corridors and connections to improve travel to and from the base.

Recommendations

The following are potential work plan action items for SSMCP to help address some critical mobility needs within the base and provide benefits to those outside the base:

A. Pursue Funding for a I-5 Exit 120 Flyover Feasibility Study

SSMCP should seek funding to study the I-5 Exit 120 Flyover concept identified as a high priority in the 2020 SSMCP Local Transportation Impact Study. This connector would eliminate the need for JBLM personnel to leave and re-enter the secure perimeter at 41st Division Drive and I-5, reducing the friction of cross-base travel, improving safety by eliminating an at-grade high speed rail crossing, and reducing operational costs of JBLM. SSMCP would likely play a leading role in securing funding and leading a feasibility evaluation of the I-5 Exit 120 Flyover.

B. Complete a Perimeter Road Corridor Study

Due to removal of the cross-base highway from state and regional long-term transportation plans, there is an increased focus on Perimeter Road and the way it will support travel in and around JBLM. Perimeter Road remains the only east-west link other than SR 512 through JBLM and is owned and maintained by JBLM Public Works. This roadway will likely become increasingly important as travel demand throughout the study area continues to increase. Perimeter Road needs to serve multimodal users, transit users, and the freight activity traveling to and from Spanaway/Frederickson. Further study of Perimeter Road is warranted to better understand how it will serve these users. SSMCP would play a leading role in securing funding and managing a study that seeks to identify Perimeter Road improvements on behalf of JBLM.
